Subject: H115 - Implement Consistent Banners

Scenario:

According to current best practices, banners should not contain system/ version specific information. Banners that contain system information are significantly more likely to be a target of attack.

Banners should contain the elements of: authorized user only; access is monitored; access is consent to monitoring; logs can be used to prosecute abuse.
Be sure that all network equipment, systems and servers present this message prior to login i.e. ssh or RDP.

Respond to this tasking with a executive memo inventorying as to which systems/services you implemented the banner and verify each implementation with a screen shot showing the banner prior to the login prompt.

Thank you.

General Counsel
